What Does AI Know About Me?

Systems, Relationships, and the Space Between

Tracy Pertner | Pertner Logic | April 2026

THE PROBLEM

What you don't know can hurt you.

34.8%

of ChatGPT inputs contain sensitive data[1]

77%

of employees pasted company info into AI[2]

27%

of ChatGPT messages are work-related[3]

Most people have no idea what their AI assistants have accumulated.

THE FRAMEWORK

Three layers of AI data exposure.

Layer 1: Surface

What the AI will tell you — memories, preferences, explicit profile data

Layer 2: Behavioral

What the AI has inferred — communication style, personality, psychology

Layer 3: System

What's behind the scenes — logs, metadata, retention, training pipelines

PLATFORM COMPARISON

How they stack up.

	ChatGPT	Claude	Gemini	Perplexity
Stores conversations	Yes — Indefinitely	Yes — Until deleted	Yes — 18mo default	Yes
Memory system	Saved + inferred	Cross-conversation	Limited	No
Trains on your data	Opt-out available	Opt-out available	Opt-out available	Opt-out available
Data export	Full export	Limited	Full (Takeout)	Limited
Human review	Yes	Yes	Yes	Yes
Cross-service data	No	No	Google ecosystem	No

Every platform collects data. The differences are in retention, inference, and control.

THE BUSINESS RISK

This isn't hypothetical.

Samsung engineers pasted source code into ChatGPT.[4]
That code became training data. AI tools were banned company-wide.

20% of organizations experienced a data breach in the past year
due to shadow AI — employees using unapproved tools.[5]

Colorado AI Act takes effect June 30, 2026.[6] Italy fined OpenAI
€15M for GDPR violations.[7] The regulatory era has arrived.

Understanding your AI data footprint isn't just good hygiene — it's becoming a compliance requirement.

TAKE ACTION

Three levels. Start today.

Individual (5 minutes)

Check saved memories. Opt out of training.
Run the audit prompt on your most-used AI.

Team (this week)

Run the audit toolkit across your team.
Identify shadow AI usage and sensitive data exposure.

Organization (this quarter)

Mandate enterprise AI tools. Block consumer AI.
Train your people. Run monthly audits.
